

4. Bearing Tolerances

Bearing tolerances; i.e., dimensional accuracy, running accuracy, etc., are regulated by standards such as ISO and JIS. For dimensional accuracy these standards prescribe tolerances and allowable error limitations for those boundary dimensions (bore diameter, outside diameter, width, assembled bearing width, chamfer, and taper) necessary when installing bearings on shafts or in housings. For machining accuracy the standards provide allowable variation limits on bore, mean bore, outside diameter, mean outside diameter and raceway width or wall thickness (for thrust bearings). Running accuracy is defined as the allowable limits for bearing runout. Bearing runout tolerances are included in the standards for inner and outer ring radial and axial runout; inner ring side runout with bore; and outer ring outside surface runout with side.

Tolerances and allowable error limitations are established for each tolerance grade or class. For example, JIS standard B 1514 (tolerances for rolling bearings) establishes five tolerance classifications (classes 0, 6, 5, 4, 2).

Starting with class 0 (normal precision class bearings), the bearing precision becomes progressively greater as the class number becomes smaller.

A comparison of relative tolerance class standards between the JIS B1514 standard classes and other standards is shown in the comparative Table 4.1.

Table 4.2 indicates which standard and tolerance class is applicable to each bearing type.

Table 4.1 Comparison of tolerance classifications of national standards

Standard		Tolerance Class					Bearing Types
Japanese Industrial Standard	JIS B 1514	Class 0 Class 6X	Class 6	Class 5	Class 4	Class 2	All types
	ISO 492	Normal class Class 6X	Class 6	Class 5	Class 4	Class 2	Radial bearings
International Organization for Standardization	ISO 199	Normal class	Class 6	Class 5	Class 4	—	Thrust ball bearings
	ISO 578	Class 4	—	Class 3	Class 0	Class 00	Tapered roller bearings (Inch series)
	ISO 1224	—	—	Class 5A	Class 4A	—	Precision instrument bearings
Deutsches Institut für Normung	DIN 620	P0	P6	P5	P4	P2	All types
American National Standards Institute (ANSI)	ANSI/AFBMA Std. 20 ¹⁾	ABEC-1 RBEC-1	ABEC-3 RBEC-3	ABEC-5 RBEC-5	ABEC-7	ABEC-9	Radial bearings (Except tapered roller bearings)
	ANSI B 3.19 AFBMA Std. 19	Class K	Class N	Class C	Class B	Class A	Tapered roller bearings (Metric series)
Anti-Friction Bearing Manufacturers (AFBMA)	ANSI/AFBMA Std. 12.1	—	Class 3P	Class 5P Class 5T	Class 7P Class 7T	Class 9P	Precision instrument ball bearings (Metric series)
	ANSI/AFBMA Sts. 12.2	—	Class 3P	Class 5P Class 5T	Class 7P Class 7T	Class 9P	Precision instrument ball bearings (Inch series)

1) "ABEC" is applied for ball bearings and "RBEC" for roller bearings.

- Notes:
1. JIS B 1514, ISO 492 and 199, and DIN 620 have the same specification level.
 2. The tolerance and allowance of JIS B 1514 are a little different from those of AFBMA standards.

Table 4.2 Bearing types and applicable tolerance

Bearing Type		Applicable standard	Applicable tolerance					Tolerance table
Deep groove ball bearing		ISO 492	class 0	class 6	class 5	class 4	class 2	Table 4.3

Spherical roller thrust bearings		ISO 199	class 0	—	—	—	—	Table 4.8
Double direction angular contact thrust ball bearings		NTN standard	—	—	class 5	class 4	—	Table 4.9

The following is a list of codes and symbols used in the bearing tolerance standards tables. However, in some cases the code or symbol definition has been abbreviated.

(1) Dimension

- d : Nominal bore diameter
- d_2 : Nominal bore diameter (double direction thrust ball bearing)
- D : Nominal outside diameter
- B : Nominal inner ring width or nominal center washer height
- C : Nominal outer ring width¹⁾
Note 1) For radial bearings (except tapered roller bearings) this is equivalent to the nominal bearing width.
- T : Nominal bearing width of single row tapered roller bearing, or nominal height of single direction thrust bearing
- T_1 : Nominal height of double direction thrust ball bearing, or nominal effective width of inner ring and roller assembly of tapered roller bearing
- T_2 : Nominal height from back face of housing washer to back face of center washer on double direction thrust ball bearings, or nominal effective outer ring width of tapered roller bearing

- r : Chamfer dimensions of inner and outer rings (for tapered roller bearings, large end of inner ring only)
- r_1 : Chamfer dimensions of center washer, or small end of inner and outer ring of angular contact ball bearing, and large end of outer ring of tapered roller bearing
- r_2 : Chamfer dimensions of small end of inner and outer rings of tapered roller bearing

(2) Dimension deviation

- Δ_{ds} : Single bore diameter deviation
- Δ_{dmp} : Single plane mean bore diameter deviation
- Δ_{d2mp} : Single plane mean bore diameter deviation (double direction thrust ball bearing)
- Δ_{Ds} : Single outside diameter deviation
- Δ_{Dmp} : Single plane mean outside diameter deviation
- Δ_{Bs} : Inner ring width deviation, or center washer height deviation
- Δ_{Cs} : Outer ring width deviation
- Δ_{Ts} : Overall width deviation of assembled single row tapered roller bearing, or height deviation of single direction thrust bearing
- Δ_{T1s} : Height deviation of double direction thrust ball bearing, or effective width deviation of roller and inner ring assembly of tapered roller bearing
- Δ_{T2s} : Double direction thrust ball bearing housing washer back face to center washer back face height deviation, or tapered roller bearing outer ring effective width deviation

(3) Chamfer boundry

- r_s min : Minimum allowable chamfer dimension for inner/outer ring, or small end of inner ring on tapered roller bearing
- r_s max : Maximum allowable chamfer dimension for inner/outer ring, or large end of inner ring on tapered roller bearing
- r_{1s} min : Minimum allowable chamfer dimension for double direction thrust ball bearing center washer, small end of inner/outer ring of angular contact ball bearing, large end of outer ring of tapered roller bearing
- r_{1s} max : Maximum allowable chamfer dimension for double direction thrust ball bearing center washer, small end of inner/outer ring of angular contact ball bearing, large end of outer ring of tapered roller bearing
- r_{2s} min : Minimum allowable chamfer dimension for small end of inner/outer ring of tapered roller bearing
- r_{2s} max : Maximum allowable chamfer dimension for small end of inner/outer ring of tapered roller bearing

(4) Dimension variation

- V_{dp} : Single radial plane bore diameter variation
- V_{d2p} : Single radial plane bore diameter variation (double direction thrust ball bearing)
- V_{dmp} : Mean single plane bore diameter variation
- V_{Dp} : Single radial plane outside diameter variation
- V_{Dmp} : Mean single plane outside diameter variation
- V_{Bs} : Inner ring width variation
- V_{Cs} : Outer ring width variation

(5) Rotation tolerance

- K_{ia} : Inner ring radial runout
- S_{ia} : Inner ring axial runout (with side)
- S_d : Face runout with bore
- K_{ea} : Outer ring radial runout
- S_{ea} : Outer ring axial runout
- S_D : Outside surface inclination
- S_i : Thrust beaing shaft washer raceway (or center washer raceway) thickness variation
- S_e : Thrust bearing housing washer raceway thickness variation

1) The dimensional difference Δ_{ds} of bore diameter to be applied for classes 4 and 2 is the same as the tolerance of dimensional difference Δ_{dmp} of average bore diameter. However, the dimensional difference is applied to diameter series 0,1,2,3 and 4 against Class 4, and also to all the diameter series against Class 2.

- 2) To be applied for deep groove ball bearings and angular contact ball bearings.
- 3) To be applied for individual raceway rings manufactured for combined bearing use.
- 4) Nominal bore diameter of bearings of 0.6 mm is included in this dimensional division.

- 6) To be applied in case snap rings are not installed on the bearings.
- 7) To be applied for deep groove ball bearings and angular contact ball bearings.
- 8) Nominal outer diameter of bearings of 2.5 mm is included in this dimensional division.

15	21
19	25

2) These are the allowable minimum dimensions of the chamfer dimension "r" or "r₁" and are described in the dimensional table.

3) Inner rings shall be in accordance with the division of "d" and outer rings with that of "D".

Note: This standard will be applied to the bearings whose dimensional series (refer to the dimensional table) specified in the standard of ISO 355 or JIS B 1512. Further, please consult NTN for bearings other than those represented here.

4) These are the allowable minimum dimensions of the chamfer dimension "r" or "r₁" and are described in the dimensional table.

Theoretical tapered hole

Tapered bore with dimensional variation within a flat plane tolerance

Table 4.11 Tolerance and allowable values (Class 0) of tapered bore of radial bearings Unit μm

315	400	+57	0	+57	0	50
400	500	+63	0	+63	0	56

1) To be applied for all radial flat surfaces of tapered bore.

Note: 1. To be applied for tapered bores of 1/12.

2. Symbols of quantity or values

d_1 : Basic diameter at the theoretically large end of the tapered bore

$$d_1 = d + \frac{1}{12} B$$

Δ_{dmp} : Dimensional difference of the average bore diameter within the flat surface at the theoretical small-end of the tapered bore.

Δ_{d1mp} : Dimensional difference of the average bore diameter within the flat surface at the theoretical large-end of the tapered bore.

V_{dp} : Inequality of the bore diameter within the flat surface
 B : Nominal width of inner ring

α : Half of the nominal tapered angle of the tapered bore

$$\alpha = 2^\circ 23' 9.4''$$

$$= 2.38594^\circ$$

$$= 0.041643 \text{ RAD}$$
